

Canary Island's newest hotel installs Miwa

The Occidental Grand Ventura, one of the newest 4-star hotels on the sunshine isle of Fuerteventura in the

Canary Islands, and the first all-inclusive resort for Occidental in Europe, has installed Miwa locks and the Nexus System 400 to cater for all its guest security needs.

Local Miwa distributor New Lock Systems S.A. was responsible for the installation, fitting 743 dark bronze finish card based electronic door locks as well as the Nexus System 400 to interface with the hotels Fidelio PMS system. Designed for use with the Nexus Grade One mortise lock set, Miwa's Nexus System 400 delivers an expanded range of electronic lock facilities and is Miwa's system of choice for hotels that need the capability of more than one front desk encoder. The system offers greater flexibility than the System 200, making up to eight encoding terminals available, offering users both flexibility and enhanced capability. Encoding can be done manually or by the use of motorised encoders, and POS (Point of Sale) details for use in bars, restaurants, cafes, business suites and sports facilities etc are easily accommodated.

System capacity includes an impressive 1000 guestrooms, with up to 30 custom names available for effective programming of room types, and the ability to use RS485 network communications methodology is included as standard.

Occidental Hotel & Resorts Mr Javier Ramirez comments: "Thanks to the design and layout of the hotel, and its location on Esquinzo Beach, most of the room locks are installed outdoors in a severe, salt aggressive climate. To cope with these conditions reliably and over a long period, without failure, takes a quality product. That's why with 743 locks being installed we had to get it right first time. So far reliability and service back up from the company has been excellent and Miwa has certainly lived up to its reputation for a quality product, competitively priced."
